TurboNet DASH 1® - PRESS RELEASE #4

Turbine Diagnostic Services Inc. is proud to announce it has reached an agreement to provide a TurboNet *DASH 1* control system to replace a GE Mark V controlling a double auto extraction with admission machine. In addition the control system will be integrated with the excitation system in order to provide a comprehensive turbine control system. The turbine will also be modified to convert the low pressure extraction into an extraction admission system. It will take advantage of excess low pressure steam available in the plant due to its new operating conditions. TDS will also supply a historian. The system is scheduled to be delivered in mid-September time frame. For more information please visit our website at www.turbinedoctor.com/turbonet.
